DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 8/18/03 has been entered.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent #5,908,997 (Arnold et al).

- As for claims 1, 3, 4: Arnold et al teach a data set selecting apparatus comprising:
a storage medium including a plurality of storage areas 350, 352, 354 and storing a plurality of data set 372 (song, file) as grouped in a plurality of data groups 378 (directory, category), each storage area being allotted to each of the data groups and storing a plurality of data sets which belong to the allotted data group (inherently included such that song within a selected directory can be selected. Col. 22, lines 2-4),
a display screen 374 displaying a list of data sets,
a drop-down menu 378 for displaying a plurality of data group selecting controls (menu buttons), each of which is correspondingly allocated for each of the data group individually and selects a data group including data set allotted thereto and stored in the allotted area of the storage medium,

• Art Unit: 2173

a display controller which causes the display screen to list a plurality of identifiers (song name) each representing each of the data set allotted to the selected data group,

a plurality of data set selecting controls 372, each of which is correspondingly allocated for each of the identifiers and selects a data set from among the data sets correspondingly represented by the identifiers according to user's selection of the identifiers. See explanation of figure 15.

Arnold et al fail to teach that the data set selecting controls are three-dimensional controls located separately and outside of the display screen and each of which are correspondingly located near the allocated identifier listed. However Official notice is taken that implementation of three dimensional control buttons located separately outside of the display screen and each of which are correspondingly located near an allocated identifier listed is well known in the art of computer interface (see US patent 5,398,045, figure 1, and US patent #5,956,034, figure 2A. It would have been obvious to one of skill in the art, at the time the invention was made, to combine the well known implementation of three-dimensional control buttons located separately and outside of the display screen and each of which are correspondingly located near the allocated identifier listed to Arnold et al. Motivation of the combining is for the advantage of simplicity and/or avoiding the cost of additional input device such as mouse, stylus, or touchscreen.

- As for claim 2: The apparatus includes a graphical control panel 200, wherein the display screen 374 and the data group selecting control are provided on the control panel 200.

Response to Arguments

4. Applicant's arguments with respect to claims 1-4 have been considered but are moot in view of the new ground(s) of rejection.
